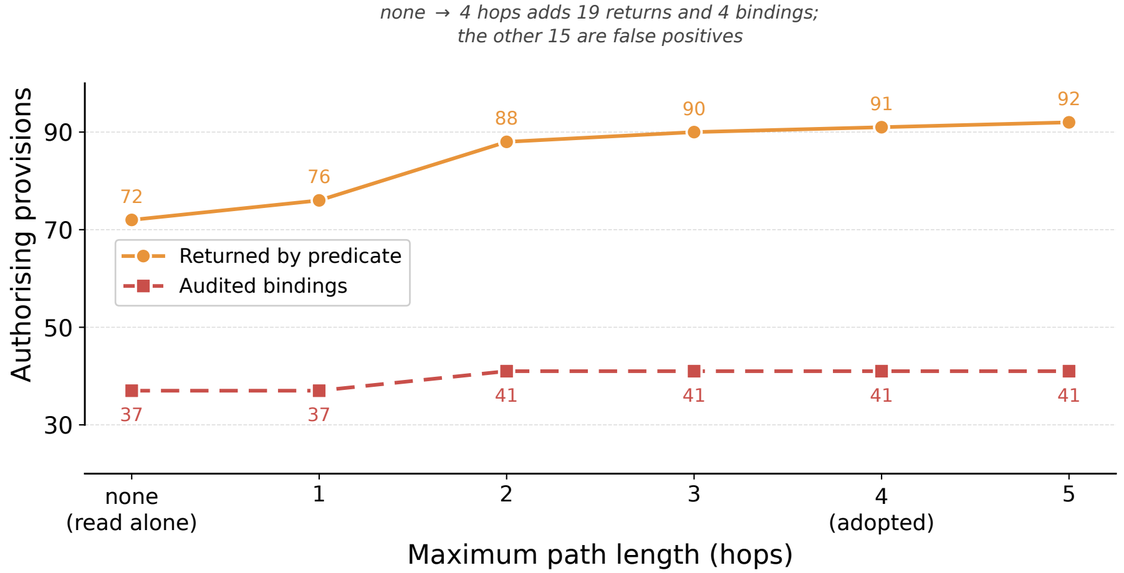
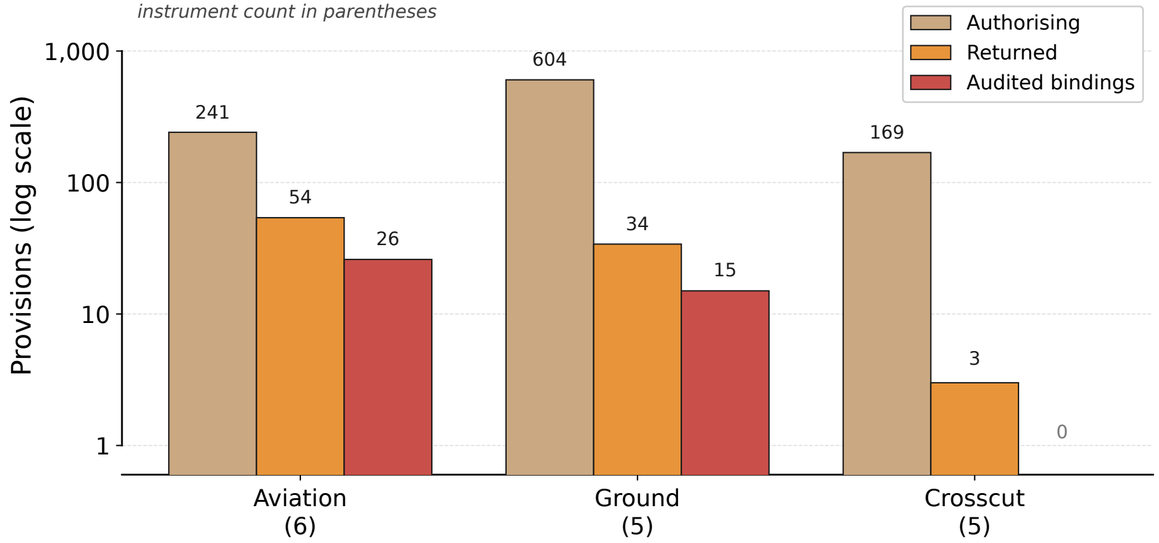
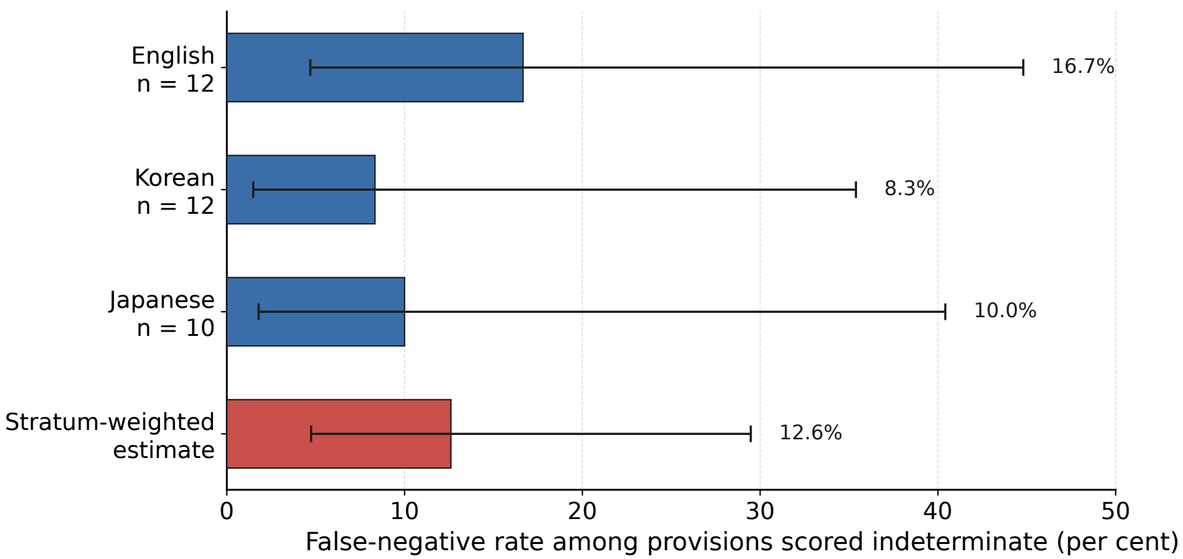
(a)



(b)



(c)



Wilson 95% CI on the strata, logit interval on the weighted estimate. The bottom bar is weighted by each stratum's share of the tier-1 population, not pooled: allocation was equal and the strata are not.

(d)

- ✓ Corpus against recorded SHA-256
  21 of 21 files
- ✓ Graph and tier counts from the frozen rules
  1,014 authorising, 91 returned
- ✓ Carve-out as node deletion
  1,164 of 5,758 nodes
- ✓ Domain rates and the surviving binding
  reproduced
- ✗ Adjudication labels from the published audit record
  rule 8-A needs the cited provision; the record omits it
- ✗ Constraint-class step (blind re-writing)
  outcome agreement 5 of 12

No constraint-level count is reported, because the step that would produce one does not reproduce.
